0.General:

Risk is inherent in all aspects, processes and functions. Risk based thinking ensures risks are identified, corrected and controlled throughout design and use of Management Systems.

1.0 Risk based processes:

- Risk can be analysed through various ways such as discussions, SWOT analysis, customer feedback analysis, competitor analysis, brainstorming, reviews and evaluation of products etc.
- Effects of risk can be negative and positive. Positive side of risk is an opportunity. An opportunity is a set of circumstances which makes it possible to do things alternate way. Taking an opportunity or alternate path presents the risk.
- Processes identified based on opportunity shall have the risk.

2.0.It is expected that an organization integrates risk based analysis of processes into their system. Every time an opportunity is presented, it shall trigger the risk analysis.
