1.0. Definitions:

1.1. Audit Duration:

Audit duration for all types of audits includes on site time at auditee's premises and time spent off-site carrying out planning, document review, interacting with auditee personnel and report writing.

1.2. Audit Day:

The duration of an audit man day is normally 420 minutes (7 hours) which does not include time for lunch & tea breaks, if any.

1.3. Effective number of personnel:

The effective number of employees consists of all full time personnel involved within the scope of certification including those working on each shift. The effective number of employees may be worked out during the Stage -1 audit for each system.

2.0. Procedure:

The time scale estimation for each management system is done through online interactive program developed by Management System Certification Department. This interactive program is available to all auditors when they login to online module of MSC.

The effective number of personnel involved within the scope of the certification is used as a basis for calculation of audit duration. Dependent upon the hours worked, number of part time personnel may be reduced and converted to an equivalent number of full time personnel. Appropriate reduction should be made to the temporary unskilled personnel who may be employed in considerable numbers in some organizations due to low level of technology and automation. Appropriate reduction of number of employees also should be made where significant proportion of staff carry out a similar simple function for instance: transport, line work, assembly lines, etc.”

If any activity is not carried out in general shift and working activities of each shift are different, such activities need to be audited and provision is to be made in calculation of audit time. A reduction in calculation of effective employees is worked out if repetitive processes are carried out in all shifts.

Audit duration estimations shall not include the time of “auditors-in-training” or the time of technical experts, interpreters, observers. The time spent for

travelling to and from audited sites is not included in the calculation of the duration of the management system.

During the certification cycle, surveillance audit duration for a given organization should be proportional to the time spent on initial certification audit (Stage 1 + Stage 2), with the total amount of time spent annually on surveillance being about 1 / 3 of the time spent on the initial certification audit. An update of auditee data related to certification.

During the initial three year certification cycle, surveillance audit duration for a given organization should be proportional to the time spent on initial certification audit (Stage 1 + Stage 2), with the total amount of time spent annually on surveillance being about 1/3 of the time spent on the initial certification audit. An update of auditee data related to certification

Complexity Factors for Reducing Time: 10 % reduction on each factor being applied subject to a maximum of 30% reduction.

- 1. Identical activities in all shifts
- 2. Already certified for another MS
- 3. Similar function carried out by a large number of employees
- 4. Very small organizations

Complexity Factors for increasing time: 10% increase on each factor but the total increase shall not increase beyond 30 per cent.

- 1. High logistics
- 2. Different languages (usage of interpreter)
- 3. Huge site size
- 4. Complex activities involving high risk
- 5. Temporary site visits
