## 1.0.General:

Auditors need to be competent and add value through their audits. In order to assist auditors-experts, a dynamic knowledge bank has been developed in BIS.

Auditors are expected to identify the following before they would take the audits:

- a) To identify the technical area.
- b) To gather sector specific knowledge and skills.
- c) Statutory and legal requirements related to the products, processes.
- d) Processes, key process parameters.
- e) Terminology used in the particular industry and their meaning.
- f) Method of distribution.
- g) Personnel qualification, if any.
- h) Related standards and specifications.
- i) Equipment/machinery/tools/ transport used in general.
- j) Customers/consumers and social impact.
- k) Issues and risks associated with the discipline and sector.
- l) Environmental issues related to the product/service
  - i. what resources are used
  - ii. waste generated
  - iii. scale of impact on the environment
- m) Application of system requirements to the specific discipline/sector so as to avoid different interpretations.
- n) Knowledge of business management practices.
- o) Knowledge of audit principles, practices and techniques and
- p) Knowledge of specific MSS and normative documents.

## 2.0. Knowledge bank:

Knowledge bank of BIS consists of all guidelines, procedures, forms and documented information on hard copy as well on the soft copy. Updation and improvement of this information shall on a continuous basis based on technological changes, procedure or process changes and based on experience. In BIS, Knowledge bank is developed based on the technical inputs from committees, technical experts and technical personnel including auditors.

**3.0.** Auditors shall update their knowledge in these areas and have the responsibility in updating the knowledge bank of BIS through continuous feedback.
